KATHAN PATEL

Full Stack SOFTWARE DEVELOPER

CONTACT

Moss Point, MS.

+1(669)243-7152

Patelkathan244@gmail.com

SKILLS

Methodology:
SDLC, Agile, Waterfall

2025 Goals:
Apache Kafka, OpenShift, Spring Batch, AWS Cloud Services, and Datadog APM. Artificial Intelligence (AI), Machine Learning (ML), and Neural Network technologies, with a focus on integrating intelligent modules into enterprise applications.

Languages:
JavaSpring, SQL, Javascript, Python

Frameworks:
Spring MVC, JSF, Hibernate, Spring Batch(Batch Processing)

Web Technologies:
HTML5, CSS3 , Bootstrap, jQuery, Ajax, JSON, XML.

Application Server:
Apache Tomcat, Web Sphere

Databases:
MySQL, PostgreSQL, MongoDB

Build /Other tools:
Apache Kafka(streaming), Elastic, Kibana, grafana, OpenShift4(OCP), Control-M, Datadog.

EDUCATION

Bachelor of Science in Computer Science
Harper College, Illinois

Bachelor of Engineering in Computer Engineering
Universal College of Engineering and Technology, India

CERTIFICATION

Java SE 8 Programmer I (1Z0-808): Score (42/70)
AWS cloud practitioner Certification

SUMMARY

- 4+ years of professional experience as a Java Developer specializing in Hibernate, Spring Frameworks, and JavaScript technologies including React.js and React Native, contributing to all phases of the software development life cycle.
- Proficient in the design, development, implementation, and testing of scalable, web-based applications with a strong focus on performance, security, and user experience.

EXPERIENCE

Founder @ KSY Group, Tx.

Jun 2023 - current.

- Founded and operate a chemical sourcing and distribution company to $3M+ turnover.
- Built a network of 100+ affiliate suppliers across industrial and specialty chemical sectors.
- Led website development, brand strategy, and digital marketing to drive growth.
- Oversaw operations, logistics, CRM implementation, and regulatory compliance.

Software Engineer @ USAA, Tx.

Jan 2022 - Apr 2023.

- Using Spring batch and Apache Kafka Applications are build using maven and automated deployment from Gitlab-ci to Ocp4 Developing for Credit Card Microservices.
- Micro-service architecture, with Spring Boot based services interacting through REST endpoints and apache Kafka. Developed services for auto rotation of privileged accounts and their passwords in CyberArk and scheduled those services to run periodically using Control-M.
- Used Kibana, Grafana, Elastic search for Monitoring logs, Spikes and JVM/ prod matrix, Datadog's APM RootSpan trace for Resources endpoints.
- **Technology Used**: Spring Boot, Apache KAFKA, Spring Batch, OCP4, java8, GitLab-Ci, Datadog, Control-M.

Jr. Software Engineer @ Synchrony Finance, IL.

Jan 2020- Dec 2021

- Involving all phases of the Software Development Life Cycle. Analysis, Design, Development, Testing, and Production phases of the projects and implementing using an Agile Methodologies.
- Developing the application using Spring MVC framework that leverages model view layer architecture also configuring Dependency Injection.
- Developing user interface using JSP, JSP Tag libraries JSTL, HTML, CSS, and JavaScript to simplify the complexities of the application.
- Performing SQL queries occasionally for the data verification in the SQL server.
- **Technology Used**: Spring Boot, Hibernate, Agile, MySQL, java8, React.js.

PROJECTS

Collection-contact-event stream

- Application is responsible for listening credit card activity published by the ECT associated with one way outbound debt Collection email.
- Application is to subscribe to ECT fulfillment Service Enterprise events, filter the events that are relevant to bank collection, rekey the event message and publish them to private topic without any Transformation.
